AMENDMENTS TO THE CLAIMS

The listing of claims will replace all prior versions, and listings, of claims in the application:

5

Listing of Claims:

1. (original): A method, comprising:
retrieving printing device data from component memory of a replaceable
10 component from a printing device used by a customer;
storing the printing device data in a customer database;
associating the printing device data with the customer; and
accessing the printing device data in the customer database to assist the
customer with solving problems related to the printing device

15

2. (original): The method as recited in claim 1, wherein the
printing device data further comprises information that uniquely identifies the
printing device.

20 3. (original) The method as recited in claim 1, wherein the
printing device data further comprises information regarding usage of the
printing device.

25 4. (original): The method as recited in claim 1, wherein the
accessing the printing device data in the customer database further comprises
accessing previously stored database information related to the customer.

5. (original): The method as recited in claim 4, wherein the previously stored database information is derived from memory of previously returned components.

5 6. (original): The method as recited in claim 4, wherein the previously stored database information is derived from information submitted by the customer on a registration card.

7. (original): The method as recited in claim 1, wherein the
10 printing device is a laser printer and the replaceable component is a toner cartridge.

8. (original): The method as recited in claim 1, further comprising associating rules to be followed when printing device data
15 associated with a customer meets certain criteria.

9. (original): The method as recited in claim 1, further comprising:

testing the replaceable component for a defect;
20 if a defect is found, storing defect information in the customer database;
associating the defect information to one or more other customers referred to in the customer database that use a similar replaceable component;
and

wherein the accessing the printing device data further comprises
25 accessing the defect information in the customer database.

10. (original): A system, comprising:

a recycling center to receive a used printing device replaceable component from a printing device of a customer, the printing device replaceable component including component memory integrated therewith;

5 a customer database that stores customer information for multiple customers, including printing devices and printing device replaceable components used by the customers;

a data transfer center wherein printing device data is retrieved from the component memory and stored in the customer database; and

10 a customer service center configured to receive calls from the customer and provide operator access to the customer database so that the operator can view the printing device data.

11. (original): The system as recited in claim 10, wherein the
15 printing device data further comprises printing device usage information that is stored by the printing device when the printing device is operating with the replaceable component installed.

12. (original): The system as recited in claim 10, wherein the
20 printing device data further comprises information that uniquely identifies the printing device in which the replaceable component was used.

13. (original): The system as recited in claim 10, wherein:
the printing device data further comprises a customer identifier that
uniquely identifies the customer utilizing the printing device;
the database further stores the customer identifier and associate the
5 customer identifier with the customer information related to the customer
identified by the customer identifier; and
the customer service center is further configured to display the customer
information related to customer in response to input of the customer identifier.

10 14. (original): The system as recited in claim 10, further
comprising a quality assurance center where used printing device replaceable
components are tested for defects and wherein the customer database further
stores data regarding a defect detected in a defective replaceable component for
each customer having customer information stored about a replaceable
15 component similar to the defective replaceable component.

15. (original): The system as recited in claim 10, wherein the
printing device comprises a laser printer and the replaceable component
comprises a toner cartridge.

20

16. (original): A method for assisting customers having problems with printing devices that use replaceable components with integrated component memory, the method comprising:

compiling data retrieved from the component memory of a plurality of
5 replaceable components into a customer database;

accessing the customer database to view compiled data that is related to a specific customer or to a printing device that is used by a specific customer to resolve a problem the customer is having with the printing device.

10 17. (original): The method as recited in claim 16, further comprising storing customer information for a customer in the customer database and associating the customer information with compiled data that is related to a printing device used by the customer.

15 18. (original): The method as recited in claim 17, further comprising acquiring the customer information for the customer from a registration card used to register the customer as the purchaser of the printing device used by the customer.

20 19. (original): The method as recited in claim 17, further comprising associating the customer information with general data related to a printing device or printing device replaceable component used by a customer.

Claims 20-25 (Cancelled).
